

Continuous straight withdrawal: retreat force costs
2 completed / 2 planned conditions; 2 valid full reference protocols

Withdrawal values: valid references + completed, safe continuous straight clearance; stop is excluded. Mean peak uses full 100 ms windows.

Masks: — pending; RUN incomplete; EX excluded; NV numerical reject; GP grasp failure; BD budget; DG depth gate; TI tilt sequence; RC recovery incomplete/censored; NA missing; N/A unplanned.

One run per condition. Differences are descriptive; no statistical significance or physical-world validation is implied.
